scott‗zweydorff‗art@proton.me

Welcome to my website ! At the moment it's just intended to provide the briefest introduction along with the contact info above.

My digital work is created using programming languages like C. You can find some of it here. Most of it is directly accessible to the eyes and ears. Some of it is especially mathematical. For instance, I have designed several symmetric crypto systems as works of art. These have to be judged ultimately as algorithms, so they are harder to display and talk about.

Lately I've been sculpting sheet metal, especially copper. These sculptures tend to fit in one hand, and they often look like little brown buildings, a bit melted by time.

My work is in general largely inspired by phenomenology and hermeneutics. I consider philosophy itself to be a form of art, and I am often busy trying to do it, in conversation and on the page. I'm also influenced by James Joyce, especially as presented in the work of Mary Ellen Bute.

Thanks for reading ! And don't hesitate to contact me with questions at the address above.
